

Get instant visibility into events that impact your cyber ecosystem.

DATA BREACHES & RANSOMWARE

- Get instant alerts on data breaches and ransomware attacks happening in your Nth party ecosystem.
- Arm yourself with solid data and information before approaching vendors.

HIGH-PROFILE CYBER EVENTS

- Know about exploited vulnerabilities and impactful third-party data breaches, often before your third-party vendor.
- Icons show the confidence level of the product identification.
- Filter your ecosystem by FocusTags™ to see the breadth of the event.

Potential impact due to Snowflake cyber incident

██████████ has a vendor relationship with Snowflake

A recent security incident at Snowflake, a cloud data platform provider, led to the compromise of customer data. Attackers accessed data by exploiting vulnerabilities via a compromised employee account, leading to a CISA alert. Snowflake has recommended increased monitoring, multi-factor authentication, and thorough analysis of account activities.

This breach might affect ██████████'s sensitive data, posing significant risks. Immediate actions include implementing Snowflake's security recommendations and enhancing cybersecurity measures to protect against similar incidents.

Recommended Actions:

- Implement multi-factor authentication (MFA) on Snowflake accounts.
- Monitor account activities for unusual behavior.
- Follow Snowflake's guidance on detecting unauthorized access.
- Update cybersecurity strategies and ensure all staff are aware of the incident.
- Maintain communication with Snowflake for updates and further recommendations.

KNOWN EXPLOITED VULNERABILITIES (KEV)

KEV

- See companies impacted by any known vulnerabilities logged in the KEV catalog maintained by CISA.
- Helps you prioritize remediation, especially for newly onboarded vendors.
