

BLACK KITE AI: TODAY & TOMORROW

Driving the Future of Third-Party Cyber Risk Management

Attackers are moving faster than ever, leveraging the latest advancements in AI to scale campaigns, adapt their techniques, and exploit third-party ecosystems. To keep pace, security teams need AI embedded into their Third-Party Cyber Risk Management (TPCRM) programs, powering the technology they rely on to secure their organizations.

AI built in, not bolted on

Black Kite was founded with a mission to provide security professionals with a complete and accurate understanding of their cyber ecosystem risk. From day one, AI has been critical to achieving that mission. We have continuously trained and refined our AI since inception, enabling us to deliver the speed, accuracy, and transparency that sets us apart.

Black Kite AI has worked behind the scenes since day one to:

Accelerate analysis

Speeds up how we gather, process, and connect complex data. It is foundational to digital foot printing and building rich organizational profiles.

Flag issues faster

Helps gather adversarial intelligence, analyze CVEs, and apply Focus Tags™, so teams can act quickly and with confidence.

Automate manual tasks

Automates tasks such as documentation parsing, populating assessment criteria, and gap analysis, paving the way for fully automated assessments.

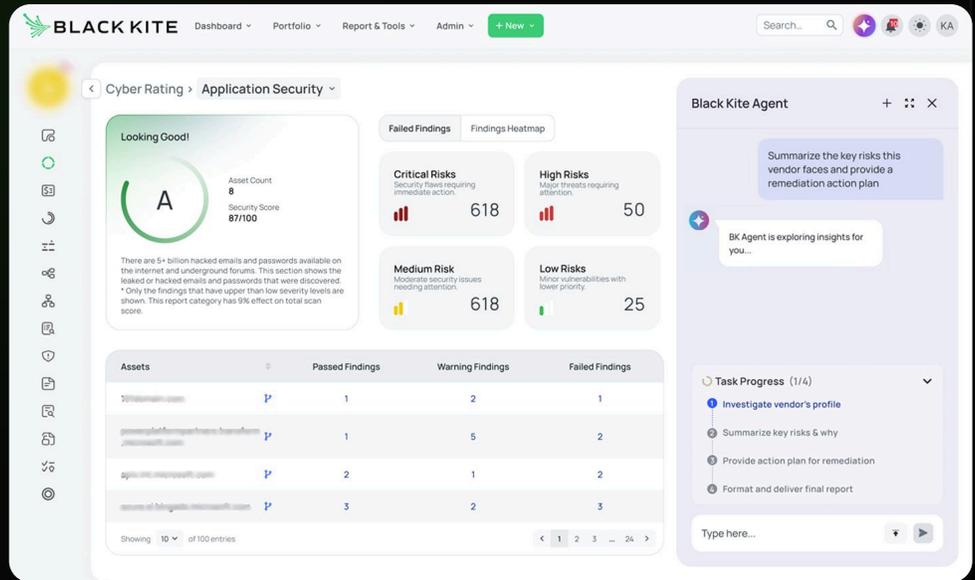

An evolution of Black Kite AI: Black Kite AI Agent

With the release of Black Kite AI Agent, we're further exposing our AI capabilities directly to our users. Powered by a network of sub agents, Black Kite AI Agent is a super agent that enables teams to more efficiently investigate, assess, and report on third-party risk.

Fully embedded across the platform, users can ask questions in context of any page or use Black Kite's pre-built blueprints to launch deep investigations, generate custom reports, and more.

BLACK KITE AI AGENT

When a user asks a question or launches a blueprint, the appropriate sub agents are automatically called upon to handle the task and get the information the user needs. Black Kite blueprints cover key use cases, auto generating prompts that are easily customizable using interactive dropdowns.

Core use cases

- DEEP INVESTIGATIONS:** Analyze vendor findings, score changes, and breach impacts.
- EXECUTIVE & BOARD REPORTING:** Create custom reports with charts, risk trends, and metrics.
- PROCUREMENT SUPPORT:** Benchmark vendors side-by-side to drive risk-based procurement decisions.
- NAVIGATION GUIDANCE:** Get instant answers, tips, and best practices to maximize product utilization.
- BUILD & SCALE TPCRM:** Access expert advice for TPCRM program design and growth.

Key features

- BLACK KITE BLUEPRINTS:** Launch complex investigations instantly with pre-built prompts.
- TRUSTED DATA FOUNDATION:** Access AI outputs backed by the industry's most accurate risk intelligence.
- DIRECT ACCESS TO AI:** Tap into the same AI feature set that has powered the Black Kite platform since inception.
- AUTOMATED REPORTING:** Generate reports, board packages, and vendor side-by-side benchmarks.

"Black Kite AI Agent brings the power of our AI directly to security teams, enabling them to investigate, assess, and report on third-party risk faster and more accurately than ever before. It transforms how teams work by combining automation and intelligence to help them make more confident TPCRM decisions."

CANDAN BOLUKBAS, CTO & FOUNDER, BLACK KITE

BLACK KITE AI AGENT

Powered by a network of sub agents designed to investigate, assess, and report on third-party risk.

ASSESSMENT AGENT

Maps vendor controls to questionnaires, frameworks, and regulations.

DOCUMENT PARSER AGENT

Extracts insights from vendor documents (e.g.SOC 2, ISO, and policy documents).

INCIDENT RESPONSE AGENT

Analyzes vendor exposure to breaches, Zero Days, and CVEs.

PRIORITIZATION AGENT

Ranks vendors by severity and business impact, highlighting the most urgent cases.

HOW-TO AGENT

Delivers instant answers, navigation tips, and best practices.

EXECUTIVE REPORTING AGENT

Creates reports and board packages with trends, metrics, and impact analysis.

PROCUREMENT AGENT

Benchmarks vendors with side-by-side risk comparisons.

TPRM EXPERT AGENT

Provides guidance on building and scaling programs (e.g. processes, team structure, R&Rs).

THREAT ACTOR INTELLIGENCE AGENT

Monitors the underbelly of the internet to map emerging threats to vulnerable vendors.

INVESTIGATION AGENT

Investigates findings, validates exposures, checks patch status, and triggers rescans.

Black Kite is a leading third-party cyber risk management platform trusted by thousands of customers to manage every supplier and every risk across their extended ecosystem.
